# **Greedy Algorithm**

## 3.a. 1-G-Coin Problem

**Aim:** Write a program to take value V and we want to make change for V Rs, and we have infinite supply of each of the denominations in Indian currency, i.e., we have infinite supply of { 1, 2, 5, 10, 20, 50, 100, 500, 1000} valued coins/notes, what is the minimum number of coins and/or notes needed to make the change.

```
Input Format:
Take an integer from stdin.
Output Format:
print the integer which is change of the number.
Example Input :
64
Output:
4
Explanaton:
We need a 50 Rs note and a 10 Rs note and two 2 rupee coins.
```

### **Algorithm:**

```
void function(int n){
  set count = 0
  increment count by 1
```

read n from input

```
increment count by 1
  set rev = 0
  set remainder = 0
  increment count by 1
  while n != 0:
    increment count by 1
    set remainder = n % 10
    increment count by 1
    set rev = rev * 10 + remainder
    increment count by 1
    set n = n / 10
    increment count by 1
  increment count by 1
  print count
}Program:
#include<stdio.h>
int main()
  int v,a=0;
  scanf("%d",&v);
  if((v/1000)!=0)
  {
    a+=v/1000;
    v=v%1000;
  }
```

```
if((v/500)!=0)
  a+=v/500;
  v=v%500;
}
if((v/100)!=0)
{
  a+=v/100;
 v=v%100;
}
if((v/50)!=0)
  a+=v/50;
  v=v%50;
}
if((v/20)!=0)
{
  a+=v/20;
  v=v%20;
if((v/20)!=0)
  a+=v/20;
  v=v%20;
}
if((v/10)!=0)
  a+=v/10;
```

```
v=v%10;
}
if((v/5)!=0)
  a+=v/5;
 v=v%5;
}
if((v/2)!=0)
{
  a+=v/2;
 v=v%2;
}
if((v/1)!=0)
{
  a+=v/1;
v=v%1;
}
printf("%d",a);
```

|   | Input | Expected | Got |   |

## 3.b. 2-G-Cookies Problem

#### Aim:

Assume you are an awesome parent and want to give your children some cookies. But, you should give each child at most one cookie.

Each child i has a greed factor g[i], which is the minimum size of a cookie that the child will be content with; and each cookie j has a size s[j]. If s[j] >= g[i], we can assign the cookie j to the child i, and the child i will be content. Your goal is to maximize the number of your content children and output the maximum number.

### Example 1:

Input:

3

123

2

11

Output:

1

Explanation: You have 3 children and 2 cookies. The greed factors of 3 children are 1, 2, 3.

And even though you have 2 cookies, since their size is both 1, you could only make the child whose greed factor is 1 content.

You need to output 1.

Constraints:

```
1 <= g.length <= 3 * 10^4
0 <= s.length <= 3 * 10^4
1 <= g[i], s[j] <= 2^31 - 1
```

## **Algorithm:**

```
void function(int c, int cs){
  set count = 0
```

```
read c from input
  read cs from input
  create array g of size c
  create array s of size cs
  for i = 0 to c - 1:
     read g[i] from input
  for j = 0 to cs - 1:
     read s[j] from input
  for i = 0 to c - 1:
     for j = 0 to cs - 1:
       if g[i] >= s[j]:
          increment count by 1
          break
  print count
Program:
#include<stdio.h>
int main()
  int c,cs,count=0;
  scanf("%d",&c);
  int g[c];
  scanf("%d",&cs);
  int s[cs];
  for(int i=0;i< c;i++)
```

}

{

```
{
     scanf("%d",&g[i]);
  }
  for(int j=0;j<cs;j++)
  {
     scanf("%d",&s[j]);
  }
  for(int i=0;i < c;i++)
  {
     for(int j=0; j < cs; j++)
       if(g[i] > = s[j])
          count+=1;
          break;
       }
     }
  }
  printf("%d",count);
}
```

|   | Input | Expected | Got |   |
|---|-------|----------|-----|---|
| ~ | 2     | 2        | 2   | ~ |
|   | 1 2   |          |     |   |
|   | 3     |          |     |   |
|   | 1 2 3 |          |     |   |

# 3.c. 3-G-Burger Problem

read a[i] from input

#### Aim:

```
A person needs to eat burgers. Each burger contains a count of calorie. After eating
the burger, the person needs to run a distance to burn out his calories.
If he has eaten i burgers with c calories each, then he has to run at least 3^{i} * c
kilometers to burn out the calories. For example, if he ate 3
burgers with the count of calorie in the order: [1, 3, 2], the kilometers he needs to
run are (3^{0} * 1) + (3^{1} * 3) + (3^{2} * 2) = 1 + 9 + 18 = 28.
But this is not the minimum, so need to try out other orders of consumption and
choose the minimum value. Determine the minimum distance
he needs to run. Note: He can eat burger in any order and use an efficient sorting
algorithm. Apply greedy approach to solve the problem.
Input Format
First Line contains the number of burgers
Second line contains calories of each burger which is n space-separate integers
Output Format
Print: Minimum number of kilometers needed to run to burn out the calories
Sample Input
5 10 7
Sample Output
Algorithm:
void function(int n){
  set f = 0
  read n from input
  create array a of size n
  for i = 0 to n - 1:
```

```
set temp = 0
  for i = 0 to n - 1:
     for j = 0 to n - 2:
       if a[i] > a[j]:
          set temp = a[j]
          set a[j] = a[j + 1]
          set a[j + 1] = temp
  set f = 0
  for i = 0 to n - 1:
     set d = (int)pow(n, i)
     set e = d * a[i]
     increment f by e
  print f
}Program:
#include<stdio.h>
#include<math.h>
int main()
  int n;
  scanf("%d",&n);
  int a[n];
  for(int i=0;i< n;i++)
  {
     scanf("%d",&a[i]);
  }
```

{

```
int temp;
for(int i=0;i< n;i++)
{
  for(int j=0; j< n-1; j++)
  {
     if(a[i]>a[j])
     {
       temp=a[j];
       a[j]=a[j+1];
       a[j+1]=temp;
     }
  }
}
int f=0,e,d;
for(int i=0;i< n;i++)
{
   d=(int)pow(n,i);
   e=d*a[i];
   f=f+e;
}
printf("%d",f);
```

}

# 3.d. 4-G-Array Sum Max Problem

### Aim:

Given an array of N integer, we have to maximize the sum of arr[i] \* i, where i is the index of the element (i = 0, 1, 2, ..., N). Write an algorithm based on Greedy technique with a Complexity O(nlogn).

Input Format:

First line specifies the number of elements-n

The next n lines contain the array elements.

**Output Format:** 

Maximum Array Sum to be printed.

Sample Input:

5

25340

Sample output:

40

## Algorithm:

```
void function(int n){
  set c = 0
  read n from input

  create array a of size n

for i = 0 to n - 1:
    read a[i] from input

set temp = 0
  for i = 0 to n - 1:
    for j = 0 to n - 2:
```

```
if a[j] > a[j + 1]:
          set temp = a[j]
          set a[j] = a[j + 1]
          set a[j + 1] = temp
  set c = 0
  for i = 0 to n - 1:
     set d = a[i] * i
     increment c by d
  print c
}
Program:
#include<stdio.h>
int main()
{
  int n,c=0;
  scanf("%d",&n);
  int a[n];
  for(int i=0;i< n;i++)
  {
     scanf("%d",&a[i]);
  }
  int temp;
  for(int i=0;i< n;i++)
  {
     for(int j=0; j< n-1; j++){
        if(a[j]>a[j+1]){
          temp=a[j];
```

```
a[j]=a[j+1];
a[j+1]=temp;
}

for(int i=0;i<n;i++)
{
  int d=a[i]*i;
  c=c+d;
}
printf("%d",c);</pre>
```

|   | Input                                      | Expected | Got |   |

# 3.e. 5-G-Product of Array Elements-Minimum

## Aim:

Given two arrays array\_One[] and array\_Two[] of same size N. We need to first rearrange the arrays such that the sum of the product of pairs( 1 element from each) is minimum. That is SUM (A[i] \* B[i]) for all i is minimum.

# Algorithm:

```
void function(int n){
  set c = 0
  set temp = 0
  read n from input
  create array a of size n
  create array b of size n
  for i = 0 to n - 1:
     read a[i] from input
  for i = 0 to n - 1:
     read b[i] from input
  for i = 0 to n - 1:
     for j = 0 to n - 2:
        if a[j] < a[j + 1]:
          set temp = a[j]
          set a[j] = a[j + 1]
          set a[j + 1] = temp
```

```
for i = 0 to n - 1:
     for j = 0 to n - 2:
       if b[j] > b[j + 1]:
          set temp = b[j]
          set b[j] = b[j + 1]
          set b[j + 1] = temp
  set c = 0
  for i = 0 to n - 1:
     set s = a[i] * b[i]
     increment c by s
  print c
}Program:
#include<stdio.h>
int main()
 int n,c=0,temp;
 scanf("%d",&n);
 int a[n];
 int b[n];
 for(int i=0;i<n;i++)
   scanf("%d",&a[i]);
 }
 for(int i=0;i<n;i++)
   scanf("%d",&b[i]);
```

{

```
}
 for(int i=0;i<n;i++)
    for(int j=0; j< n-1; j++){
      if(a[j] < a[j+1]){
        temp=a[j];
        a[j]=a[j+1];
        a[j+1]=temp;
      }
    }
  for(int i=0;i<n;i++)
 {
    for(int j=0;j< n-1;j++){}
      if(b[j]>b[j+1]){
        temp=b[j];
        b[j]=b[j+1];
        b[j+1]=temp;
      }
   }
 }
 for(int i=0;i<n;i++)
    int s=a[i]*b[i];
    C=C+S;
 printf("%d",c);
}
```
